SANTACOMPACT CK

STEAMING AND COMPACTING MACHINE
FOR OPEN WIDTH KNITTED FABRICS

SANTACOMPACT CK

SANTACOMPACT CK

Steaming and compacting machine for open width knitted fabrics

Santacompact CK is the optimal solution to achieve the best residual shrinkage values in the finishing of knitted fabrics.

The treatment ensures a smooth and soft touch preserving the maximum fabric volume.

Applications

- Perfect distortion-free width control by means of an entry pin frame equipped with a weft straightening unit and independent chain drive
- Condensate-free steaming box with adjustable steaming action according to the fabric width made in corrosion resistant materials
- Tensionless fabric feeding into the compacting unit thanks to the extremely reduced distance between the de-pinning point and the first compacting passage
- Exclusive design felt belts for better compacting at higher speed

Advantages

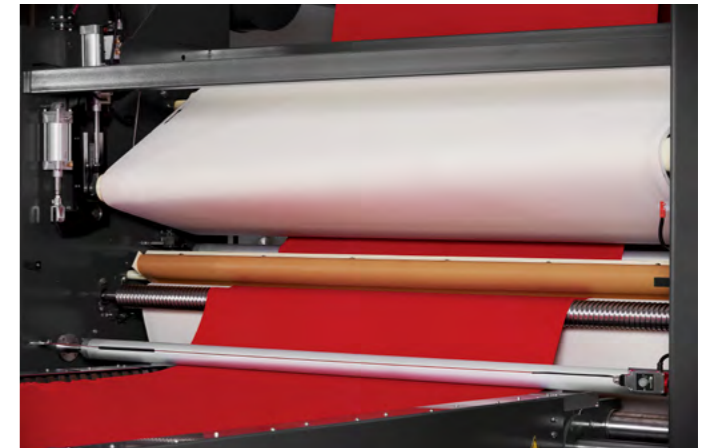

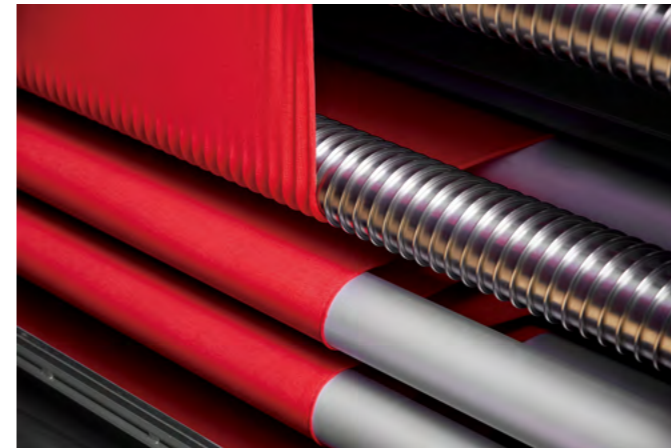

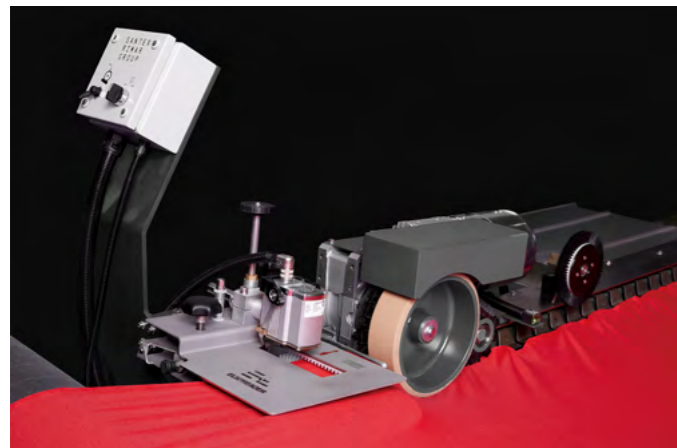

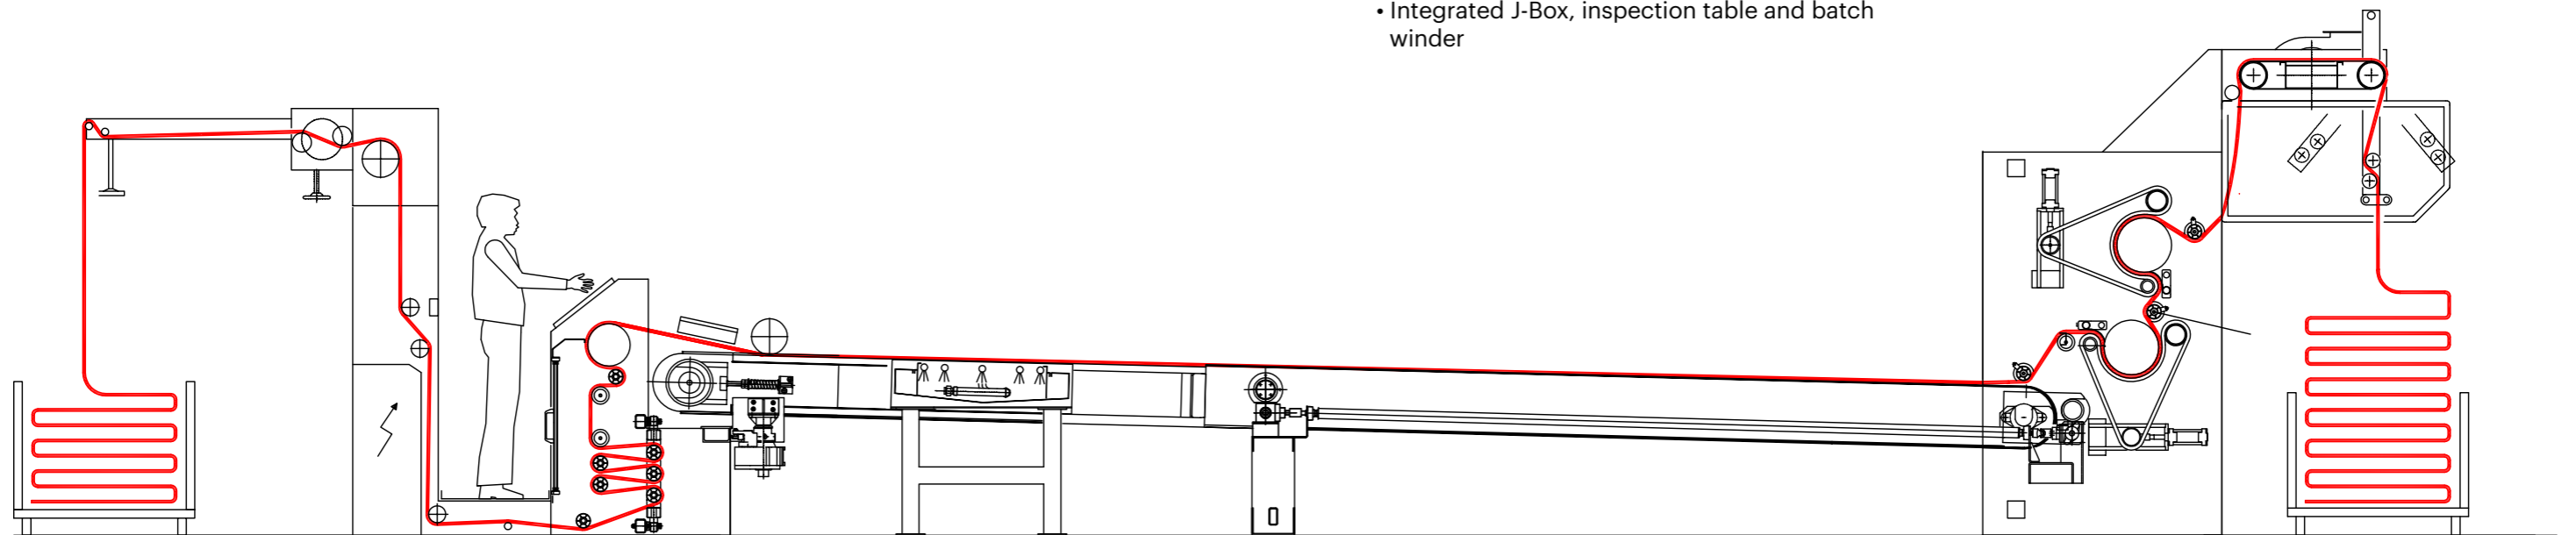

- No further stenter frame treatment required in case of 100% cotton knitted fabrics thanks to the pin frame length and the weft distortion controls
- Minimal residual shrinkage values combined with a soft and voluminous touch ensured by the special multilayer felt belt structure
- Drives synchronization by means of electronic loading cells for smooth fabrics handling during the process
- Touch screen panel with recipes storage made by Siemens

Options

- Selvages glueing and high efficiency drying unit
- Selvages trimming unit
- Integrated J-Box, inspection table and batch winder

TECHNICAL DATA

Working width	140 - 260 cm (others on request)
Machine speed	0-50 m/min step less adjustable 30m/min average
Working speed	25 m/min with edge gluing and drying
Power supply	Approx 100 kw (average) as required for each installation
Dimension	Length 14m
Width	Working width + 1.7m
